Applied Statistics

How long does it take to get to class?

STUDENTS
First Student, Second Student

TEACHER
Prof. Dr. Teacher Name

2026

The survey

→ 40 students answered a short form
→ Each one gave the time from home to class
→ On foot, by bike, by bus or by car

The mean is $\overline{x} = \frac{1}{n} \sum_i x_i$.

Course

Applied Statistics (STA210), 2026.

Example 1 — The spread

Five students took 10, 15, 20, 25 and 30 minutes. Find the mean and the standard deviation.

Solution.

$$\overline{x} = 20 \text{ min}, \quad s = \sqrt{\frac{100 + 25 + 0 + 25 + 100}{4}} \approx 7.9 \text{ min}$$

⚠ **Caution!** The sample standard deviation divides by $n - 1$, not by n.

Thank you!
