UNDERGRADUATE THESIS

Recognizing bird songs in city parks

Bachelor's in Biology

December 2026

PART 1

Introduction

The problem

→ City parks are full of birds, heard more often than seen
→ Telling the songs apart by ear takes years of practice
→ A phone can record them, and a program can name the species

GOAL

Name the species from a short recording.

RESULT

A classifier evaluated on 300 recordings.

PART 2

Method

The recordings

Set	Recordings	Accuracy
Training	1200	–
Validation	300	0.88
Test	300	0.86

Note. The accuracy is the share of recordings named right (0 to 1).

PART 3

Conclusion

Contributions

- A set of 1800 labelled recordings of 25 species
- A classifier with an accuracy of 0.86 on the test set
- The code, open

Thank you!
